Notes: Volume data are from Mass-DAC (www.massdac.org) for FY2005.

Cost data are from DHCFP 403 Hospital Cost Report for FY2004. Costs are reported at the hospital organization level.

Definitions:

Cardiac Surgery refers to surgery on the heart and the thoracic great vessels performed on persons 18 years of age and older. Examples of cardiac surgery include coronary artery bypass grafts, heart valve repair or replacement, heart transplantation, surgery of the thoracic aorta, repair of congenital heart defects and minimally invasive heart surgery.

CABG (Coronary Artery Bypass Surgery)- an operation in which the blocked coronary artery is bypassed with the patient's own vessel to improve the flow to the heart muscle. Coronary vessels are those vessels that supply the heart muscle with blood and oxygen.

Isolated CABG (Isolated Coronary Artery Bypass Surgery) – Isolated CABG is a surgical procedure in which CABG is the only major cardiac surgery performed.
